Seat Belt Massager

Abstract of the Disclosure

A seat belt massager for detachably fastening on a seat belt, includes a massager body which has a message portion defining an inner treatment surface; a massaging device supported on the massage portion of the massager body and communicated with the treatment surface in such manner that the massaging device is adapted to deliver massage impulse to an exterior of the massager body through the treatment surface; and a seat belt fastening arrangement provided on the massager body for detachably fastening the massager body on the seat belt.
